The Ecojax is an economical snow guard modeled after the proven SnoBlox Deuce design. It can be adhesive or mechanically fastened and requires a 1.5" flat mounting area. They fit most popular 36" panels with three 12" flats or four 9" flats without rib straddling! The waffled base provides almost triple the bonding power of a smooth bottom guard in this size category. We offer starter points for mechanical fastening.

Avoid installing the Ecojax in isolated areas like above chimneys, doorways, vents, and partial roof sections.
