Our exclusive Membrane Mounts allow SnoBar/ ColorBar products to be safely installed on Membrane/ TPO type roof systems without roof leaks, membrane damage, or voided warranties. Membrane mounts are fabricated with a 12 gauge 304 stainless steel plate, two 304 stainless steel studs and one extruded aluminum ColorBracket mount. Six predrilled screw holes allow for mechanical fastening to new or existing roof structures. They are designed to be mechanically fastened over the base membrane layer then flashed over by a 12"x12" square of membrane for a watertight seal.

If you have a membrane style roof and need a snow retention system, call us at 800-766-5291 so we can discuss your project.
