Our exclusive Shingle Mounts allow SnoBar and ColorBar products to be safely installed on shingle roof systems without causing roof leaks, shingle damage, or voided warranties. Shingle Mounts are fabricated with a 12" X 4"- 24 gauge galvalume strap, two 304 stainless steel mounting bolts, and one extruded aluminum ColorBracket mount. Four predrilled screw holes allow for mechanical fastening to new or existing roof structures.

This is the fastest installing system on the market due to the exclusive top-loading mounts. Fast and easy installation means lower labor costs and less chance of scratching the bar's finish!

If you have a shingle roof and need a snow retention system, call us at 800-766-5291.
