The innovative SnoBar Clamp remains the only patented, stainless steel clamp that allows for the bar to be top loaded. This allows for the fastest install times with fewer parts. The 12-gauge stainless steel SnoBar Clamp uses industry-leading, low-torque, stainless steel, "Cup Tip" set screws that do not pierce or penetrate roof panels. Because of this fact, it will not void the manufacturer warranty on your roof.

This is a one-piece mounting clamp that utilizes two cup tip set screws. This clamp does not require panel feeding which makes it fast and easy to install. This also mitigates damage to the seam's finish that is normally associated with panel fed clamps. Because our patented clamps are top loading, installation is faster and easier than other systems!
