Our exclusive Double-Bar Mounts are perfect for projects that require a two bar system in their specifications. This innovative mounting system allows SnoBar/ColorBar products to be safely installed on standing seam roofs without leaks, damage, or voided warranties. Constructed from extruded aluminum and utilizing the proven power of our patented RoofClamps, these mounts can be used for new or existing roofs. Attachment is achieved with our "Cupped Tip Stainless Steel Screws". These specially designed screws permanently anchor to the seam. They require 90/in.lbs of torque, whereas round tip set screws can require up to 180/in.lbs. Less torque means more efficient holding power and less chance of damaging the seam. Installation is fast and easy, while avoiding costly damage to the roof's finish.
