When it comes to safeguarding your roof from the perils of sliding snow and ice, you need a solution that's as extreme as the elements themselves. Enter the VentSaver Extreme, the latest addition to our VentSaver product line. Building upon the success of the VentSaver EZ and VentSaver HD, the VentSaver Extreme takes roofing protection to an entirely new level.

**Industry-First Innovation - Upper Wing Kit:** The VentSaver Extreme offers an industry-first feature with the optional Upper Wing Kit. This ingenious addition is exclusively available with the VentSaver Extreme and provides vital protection for the upper section of your larger pipes and chimneys against sliding snow and ice damage. This unique design sets the VentSaver Extreme apart from the rest.

**Wider Wings for Unmatched Protection:** The VentSaver Extreme boasts an impressive 21" wingspan, offering superior protection for the base of your pipes against the relentless forces of nature. With an extended set of lower wings, it's engineered to combat the challenges posed by sliding snow and ice like never before. Each of the lower wings is secured with four fasteners to the structural components of the roof system.

**Double Mounting Base for Unshakeable Stability:** The VentSaver Extreme includes a double mounting base designed to anchor it firmly to your roof. With 12 heavy-duty roofing screws, it has twice the fastening strength of the other models.
